

# Structures and Bonding

## Giant covalent structures: Graphene

### Worksheet

Combined Science - Chemistry - Key Stage 4

Mr Robbins

# Periodic Table of Elements

Key:

relative atomic mass

Name

1

H

hydrogen

1

\* The lanthanides (atomic numbers 58 - 71) and the Actinides (atomic numbers 90 - 103) have been omitted.

Relative atomic masses for **Cu** and **Cl** have not been rounded to the nearest whole number.

**1.** (a) This part of the question is about graphene. Choose the correct answer to complete each sentence.

(i) The bonds between the atoms in graphene are .....**(1)**

(ii) Graphene is made of ..... atoms. **(1)**

(iii) In graphene each atom bonds to ..... other atoms. **(1)**

(b) This part of the question is about graphite. Graphite is used in pencils. Explain why **(2)**

**2.** Graphite is a non-metal. Explain why graphite conducts electricity. **(3)**

**3.** Lightweight handlebars for bicycles are made from materials containing carbon nanotubes. Carbon nanotubes are lightweight but very strong.

(a) Complete each sentence.

(i) Carbon nanotubes are similar to graphite because each carbon atom is joined to \_\_\_\_\_ other carbon atoms.

(ii) The carbon atoms are joined by \_\_\_\_\_ bonds

(iii) Carbon nanotubes are very strong because the \_\_\_\_\_ are hard to break

(b) An airplane contains many miles of electrical wiring made from copper. This adds to the mass of the airplane. It has been suggested that the electrical wiring made from copper could be replaced by lighter carbon nanotubes.

(i) What does the term 'nano' tell you about the carbon nanotubes? (1)

(ii) Like graphite, each carbon atom is joined to three other carbon atoms. Explain why the carbon nanotube can conduct electricity. (2)

# Answers

1. (a)
  - (i) covalent bonds
  - (ii) carbon
  - (iii) three
2. Graphite is made of layers. Between the layers there are delocalised electrons Which can flow.
3. (a)
  - (i) three
  - (ii) covalent
  - (iii) covalent bonds(b)
  - (i) they are very small
  - (ii) They have delocalised electrons. Which can flow

# Practice question

Carbon nanotubes are made from a single layer of graphite. Carbon nanotubes have a high melting point, are good conductors and incredibly strong in tension. Use your knowledge of structures and bonding to explain these properties [3 marks]

Sentence starters:

Carbon nanotubes have a high melting point because....

Carbon nanotubes are strong because...

Carbon nanotubes are good conductors of electricity because....

# Practice question

Carbon nanotubes are made from a single layer of graphite. Carbon nanotubes have a high melting point, are good conductors and incredibly strong in tension

Use your knowledge of structures and bonding to explain these properties  
[3 marks]

Answer

- Carbon nanotubes have a high melting point because they have **strong covalent bonds** which take a lot of **heat energy to break**
- Carbon nanotubes are also very strong because of these strong **covalent bonds**
- Carbon nanotubes are good conductors of electricity because they have **delocalised electrons which are able to flow through the tube**
