# **Proportion problems: Use fractions to express proportions**

## **Independent Task**

Miss Parsons

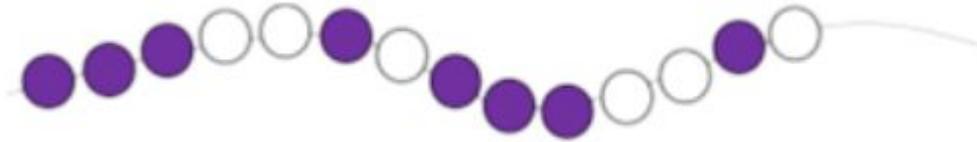

## Question 1

- a) Using fractions, what proportion are triangles and what proportion are circles?
- b) Can you express the proportions using decimals and percentages?
- c) True or false? The proportion that are triangles will always be  $\frac{1}{2}$  of whatever the size of the pattern.
- d) True or false? In a pattern of 100 shapes, there will be 40 circles.

## Question 2

- a) Using fractions, what proportion are purple beads and what proportion are white beads?
- b) True or false? The proportion that are white beads will always be  $\frac{3}{4}$ .

### Question 3

- a) What proportion of the whole pattern is each different shape?
- b) What if the pattern repeated and contained 30 shapes?
