

# What is recycling and why is it important?

Science

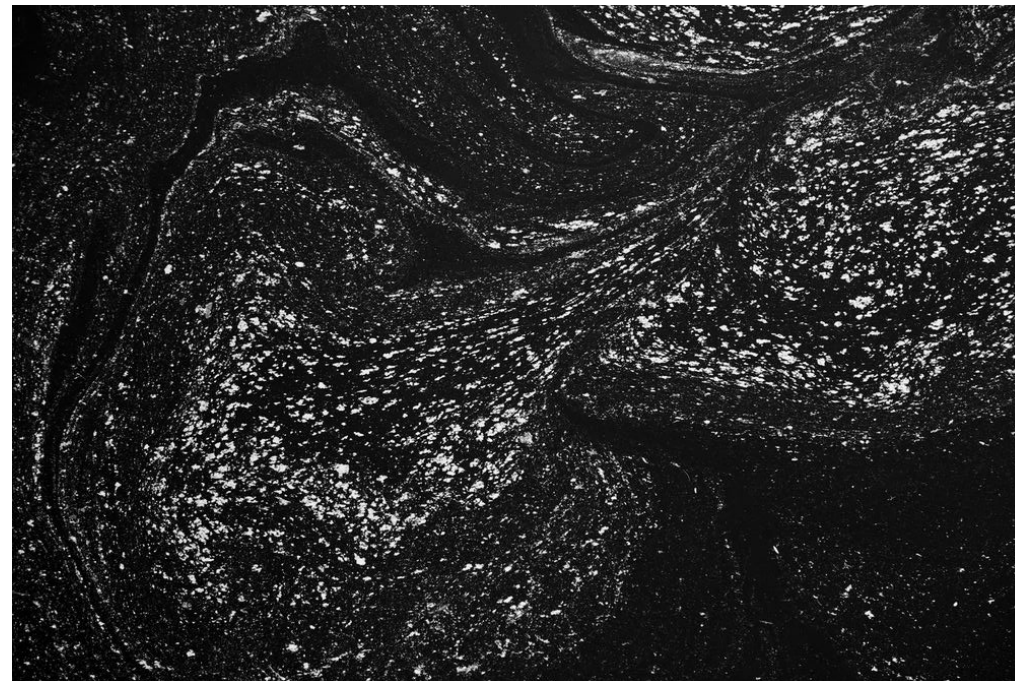

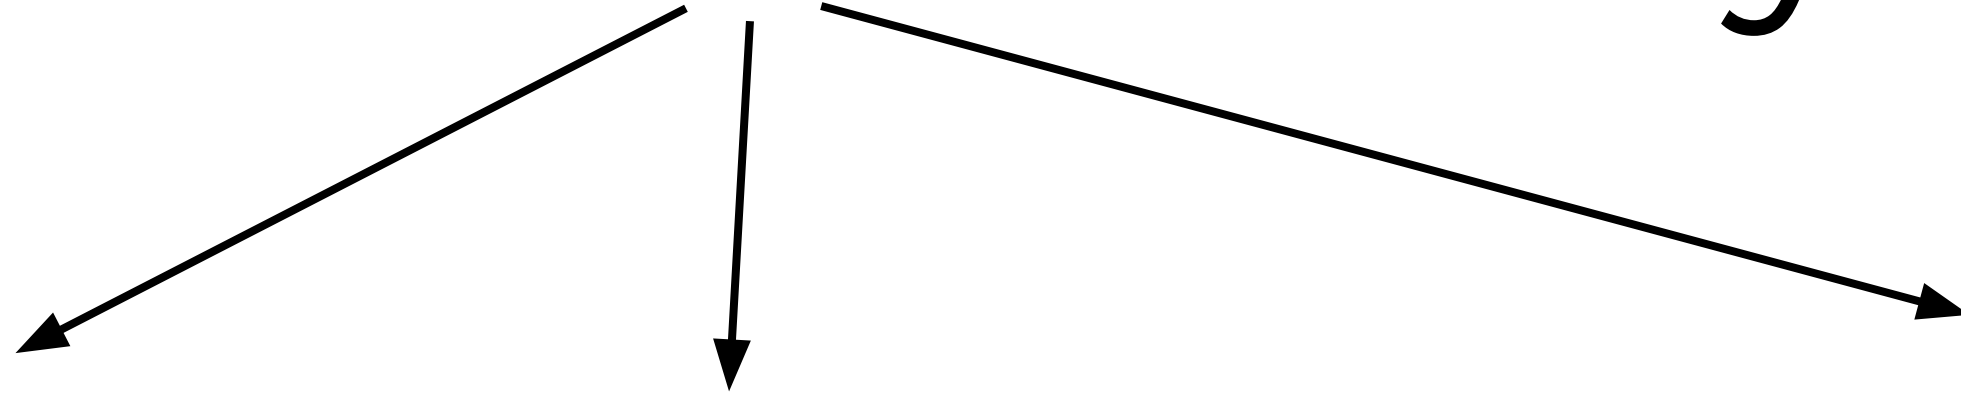

Miss Roberts

# Raw

# Synthetic

# TASK

1. Recycling is a process of c\_\_\_\_\_ and re\_\_\_\_\_ materials to make new synthetic materials.
2. Why do we want to avoid using raw materials too much?

# TASK

1. Why are landfills not an effective way to dispose of rubbish?
2. Why is it not a good thing to always use new raw materials to make the things we need?

# **Which reason for recycling do you think is the most important and why?**

- We will run out of raw materials
- We are using up space
- We are destroying habitats

**run out of space**

**raw**

**run out**

**natural habitats**

## **Why is it important to recycle?**

It is important to recycle, because if we only used \_\_\_\_\_ materials, then we will eventually \_\_\_\_\_.

Another reason is that the landfills we send our rubbish to will eventually \_\_\_\_\_.

By polluting natural areas, we are also destroying \_\_\_\_\_ where wildlife lives.
