Time

$$\text{Speed} = \text{Distance travelled} \div \text{time}$$

$$\text{Speed} = \text{Distance travelled} \div \text{time}$$

$$\text{Speed} = \text{Distance travelled} \div \text{time}$$

$$\text{Speed} = \text{Distance travelled} \div \text{time}$$

$$\text{Speed} = \text{Distance travelled} \div \text{time}$$

$$\text{Distance} = 50 - 10 = \mathbf{40} \text{ m}$$

$$\text{Time} = 30 - 10 = \mathbf{20} \text{ s}$$

$$\text{Speed} = \text{Distance} \div \text{time}$$

$$\text{Speed} = \mathbf{40} \div \mathbf{20}$$

$$\text{Speed} = 2 \text{ m/s}$$

$$\text{Speed} = \text{Distance travelled} \div \text{time}$$

$$\text{Distance} = 80 - 20 = \mathbf{60} \text{ m}$$

Time =

$$\text{Speed} = \text{Distance travelled} \div \text{time}$$

$$\text{Distance} = 80 - 20 = \mathbf{60} \text{ m}$$

$$\text{Time} = 50 - 5 = \mathbf{45} \text{ s}$$

$$\text{Speed} = \text{Distance} \div \text{time}$$

$$\text{Speed} = \text{Distance travelled} \div \text{time}$$

$$\text{Distance} = 80 - 20 = \mathbf{60} \text{ m}$$

$$\text{Time} = 50 - 5 = \mathbf{45} \text{ s}$$

$$\text{Speed} = \text{Distance} \div \text{time}$$

$$\text{Speed} = \mathbf{60} \div \mathbf{45}$$

$$\text{Speed} = 1.33 \text{ m/s}$$

$$\text{Speed} = \text{Distance travelled} \div \text{time}$$

$$\text{Distance} = 50 - 5 = \mathbf{45} \text{ m}$$

$$\text{Time} = 80 - 20 = \mathbf{60} \text{ s}$$

$$\text{Speed} = \text{Distance} \div \text{time}$$

$$\text{Speed} = \mathbf{45} \div \mathbf{60}$$

$$\text{Speed} = 0.75 \text{ m/s}$$

$$\text{Speed} = \text{Distance travelled} \div \text{time}$$

$$\text{Distance} = 100 - 25 = \mathbf{75} \text{ m}$$

$$\text{Time} = 50 - 10 = \mathbf{40} \text{ s}$$

$$\text{Speed} = \text{Distance} \div \text{time}$$

$$\text{Speed} = \mathbf{75} \div \mathbf{40}$$

$$\text{Speed} = 1.875 \text{ m/s}$$

$$\text{Speed} = \frac{\text{Distance travelled}}{\text{time}}$$

$$\text{Distance} = 100 - 25 = \mathbf{75} \text{ m}$$

$$\text{Time} = 50 - 10 = \mathbf{40} \text{ s}$$

$$\text{Speed} = \text{Distance travelled} \div \text{time}$$

$$\text{Distance} = 100 - 25 = \mathbf{75} \text{ m}$$

$$\text{Time} = 50 - 10 = \mathbf{40} \text{ s}$$

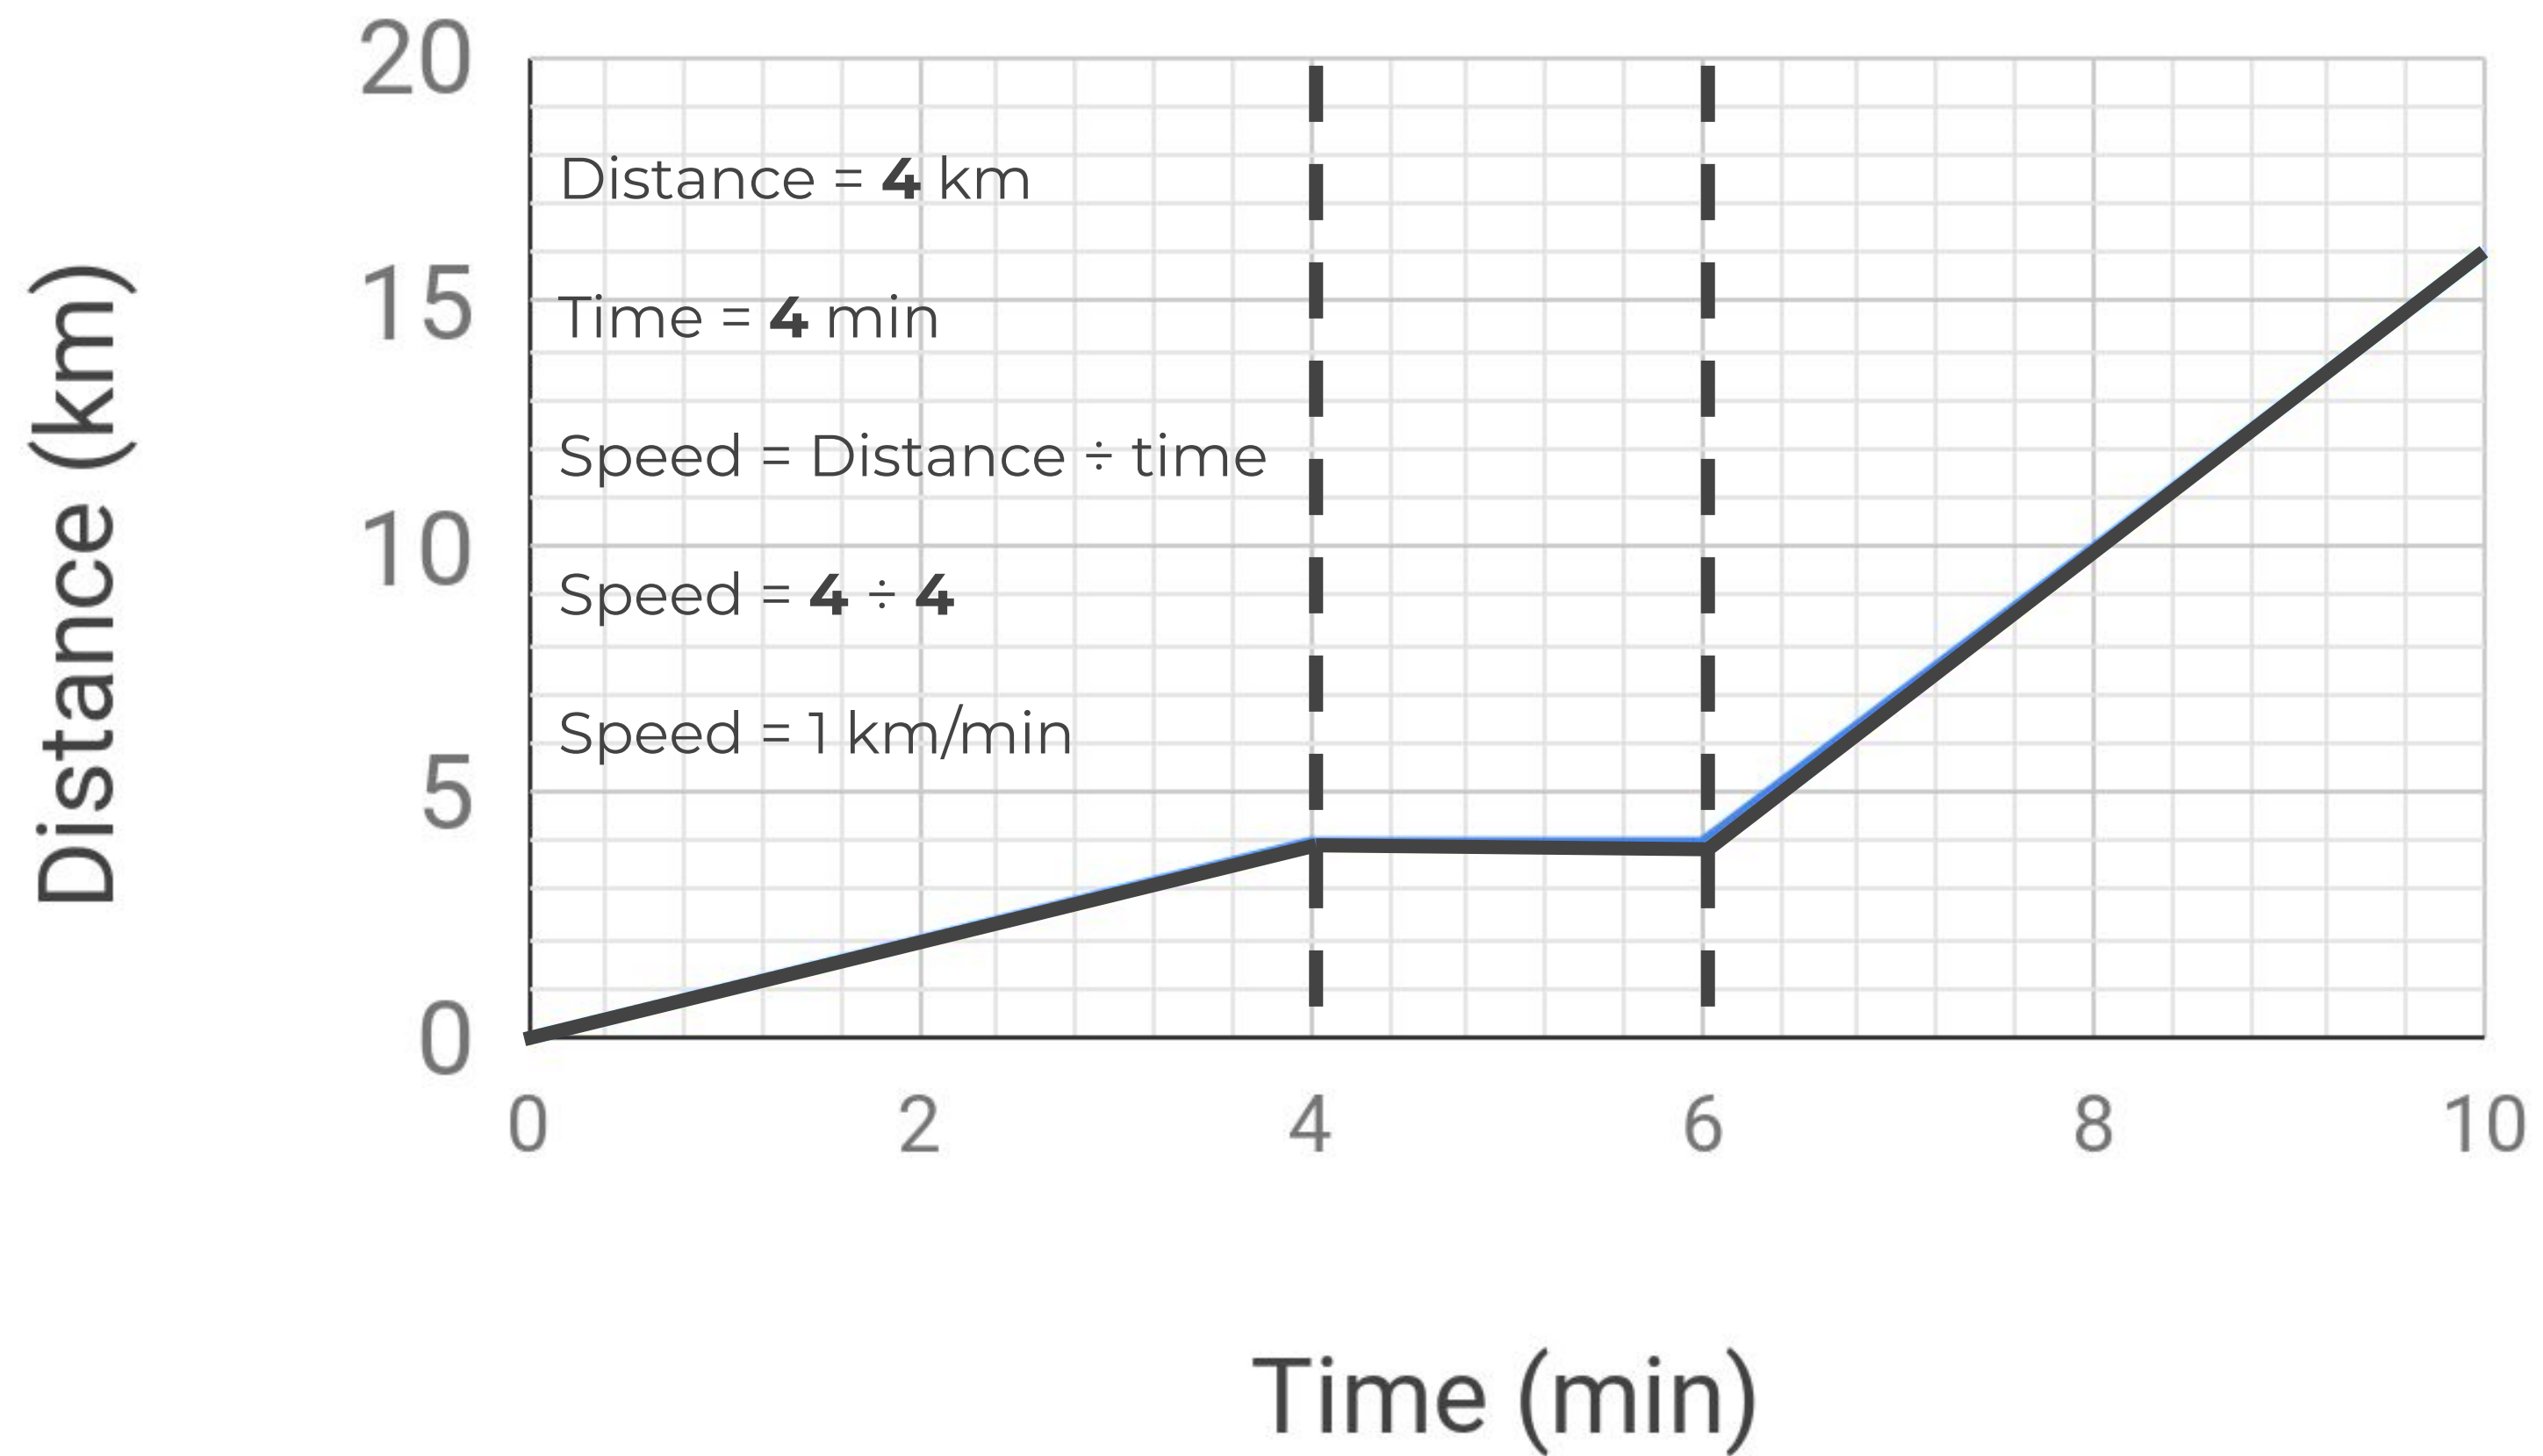

$$\text{Speed} = \text{Distance} \div \text{time}$$

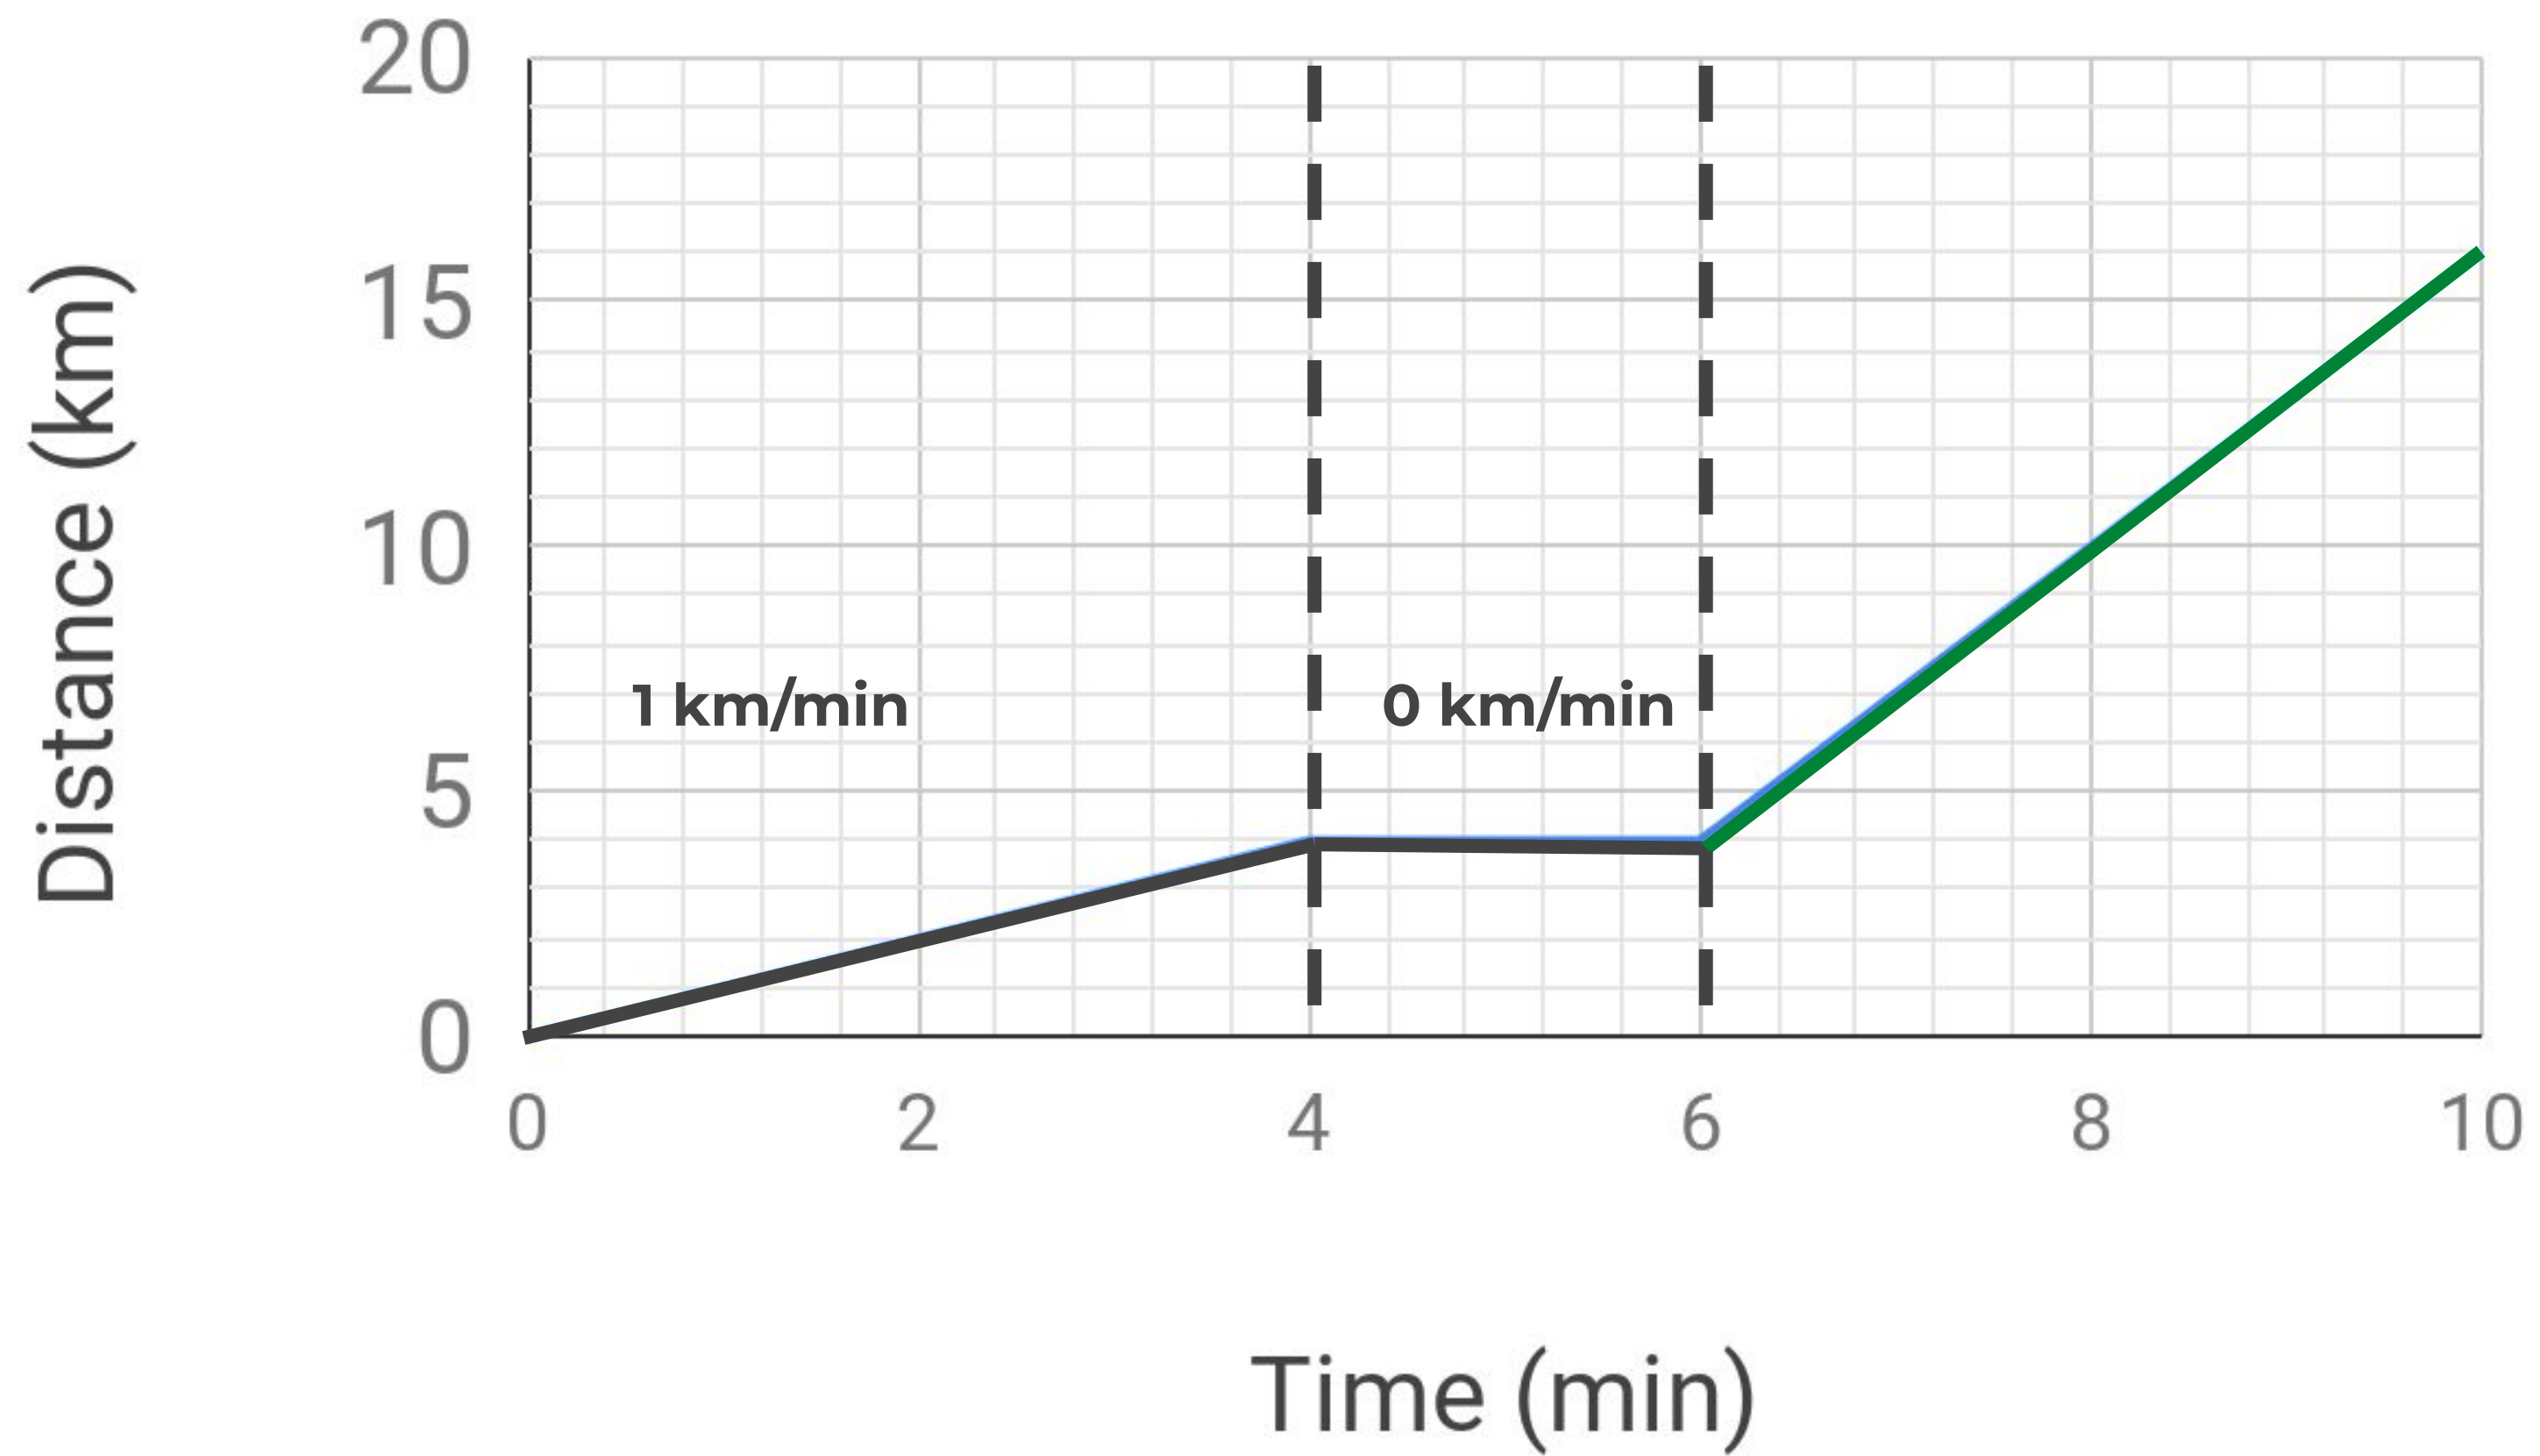

$$\text{Speed} = \mathbf{75} \div \mathbf{40}$$

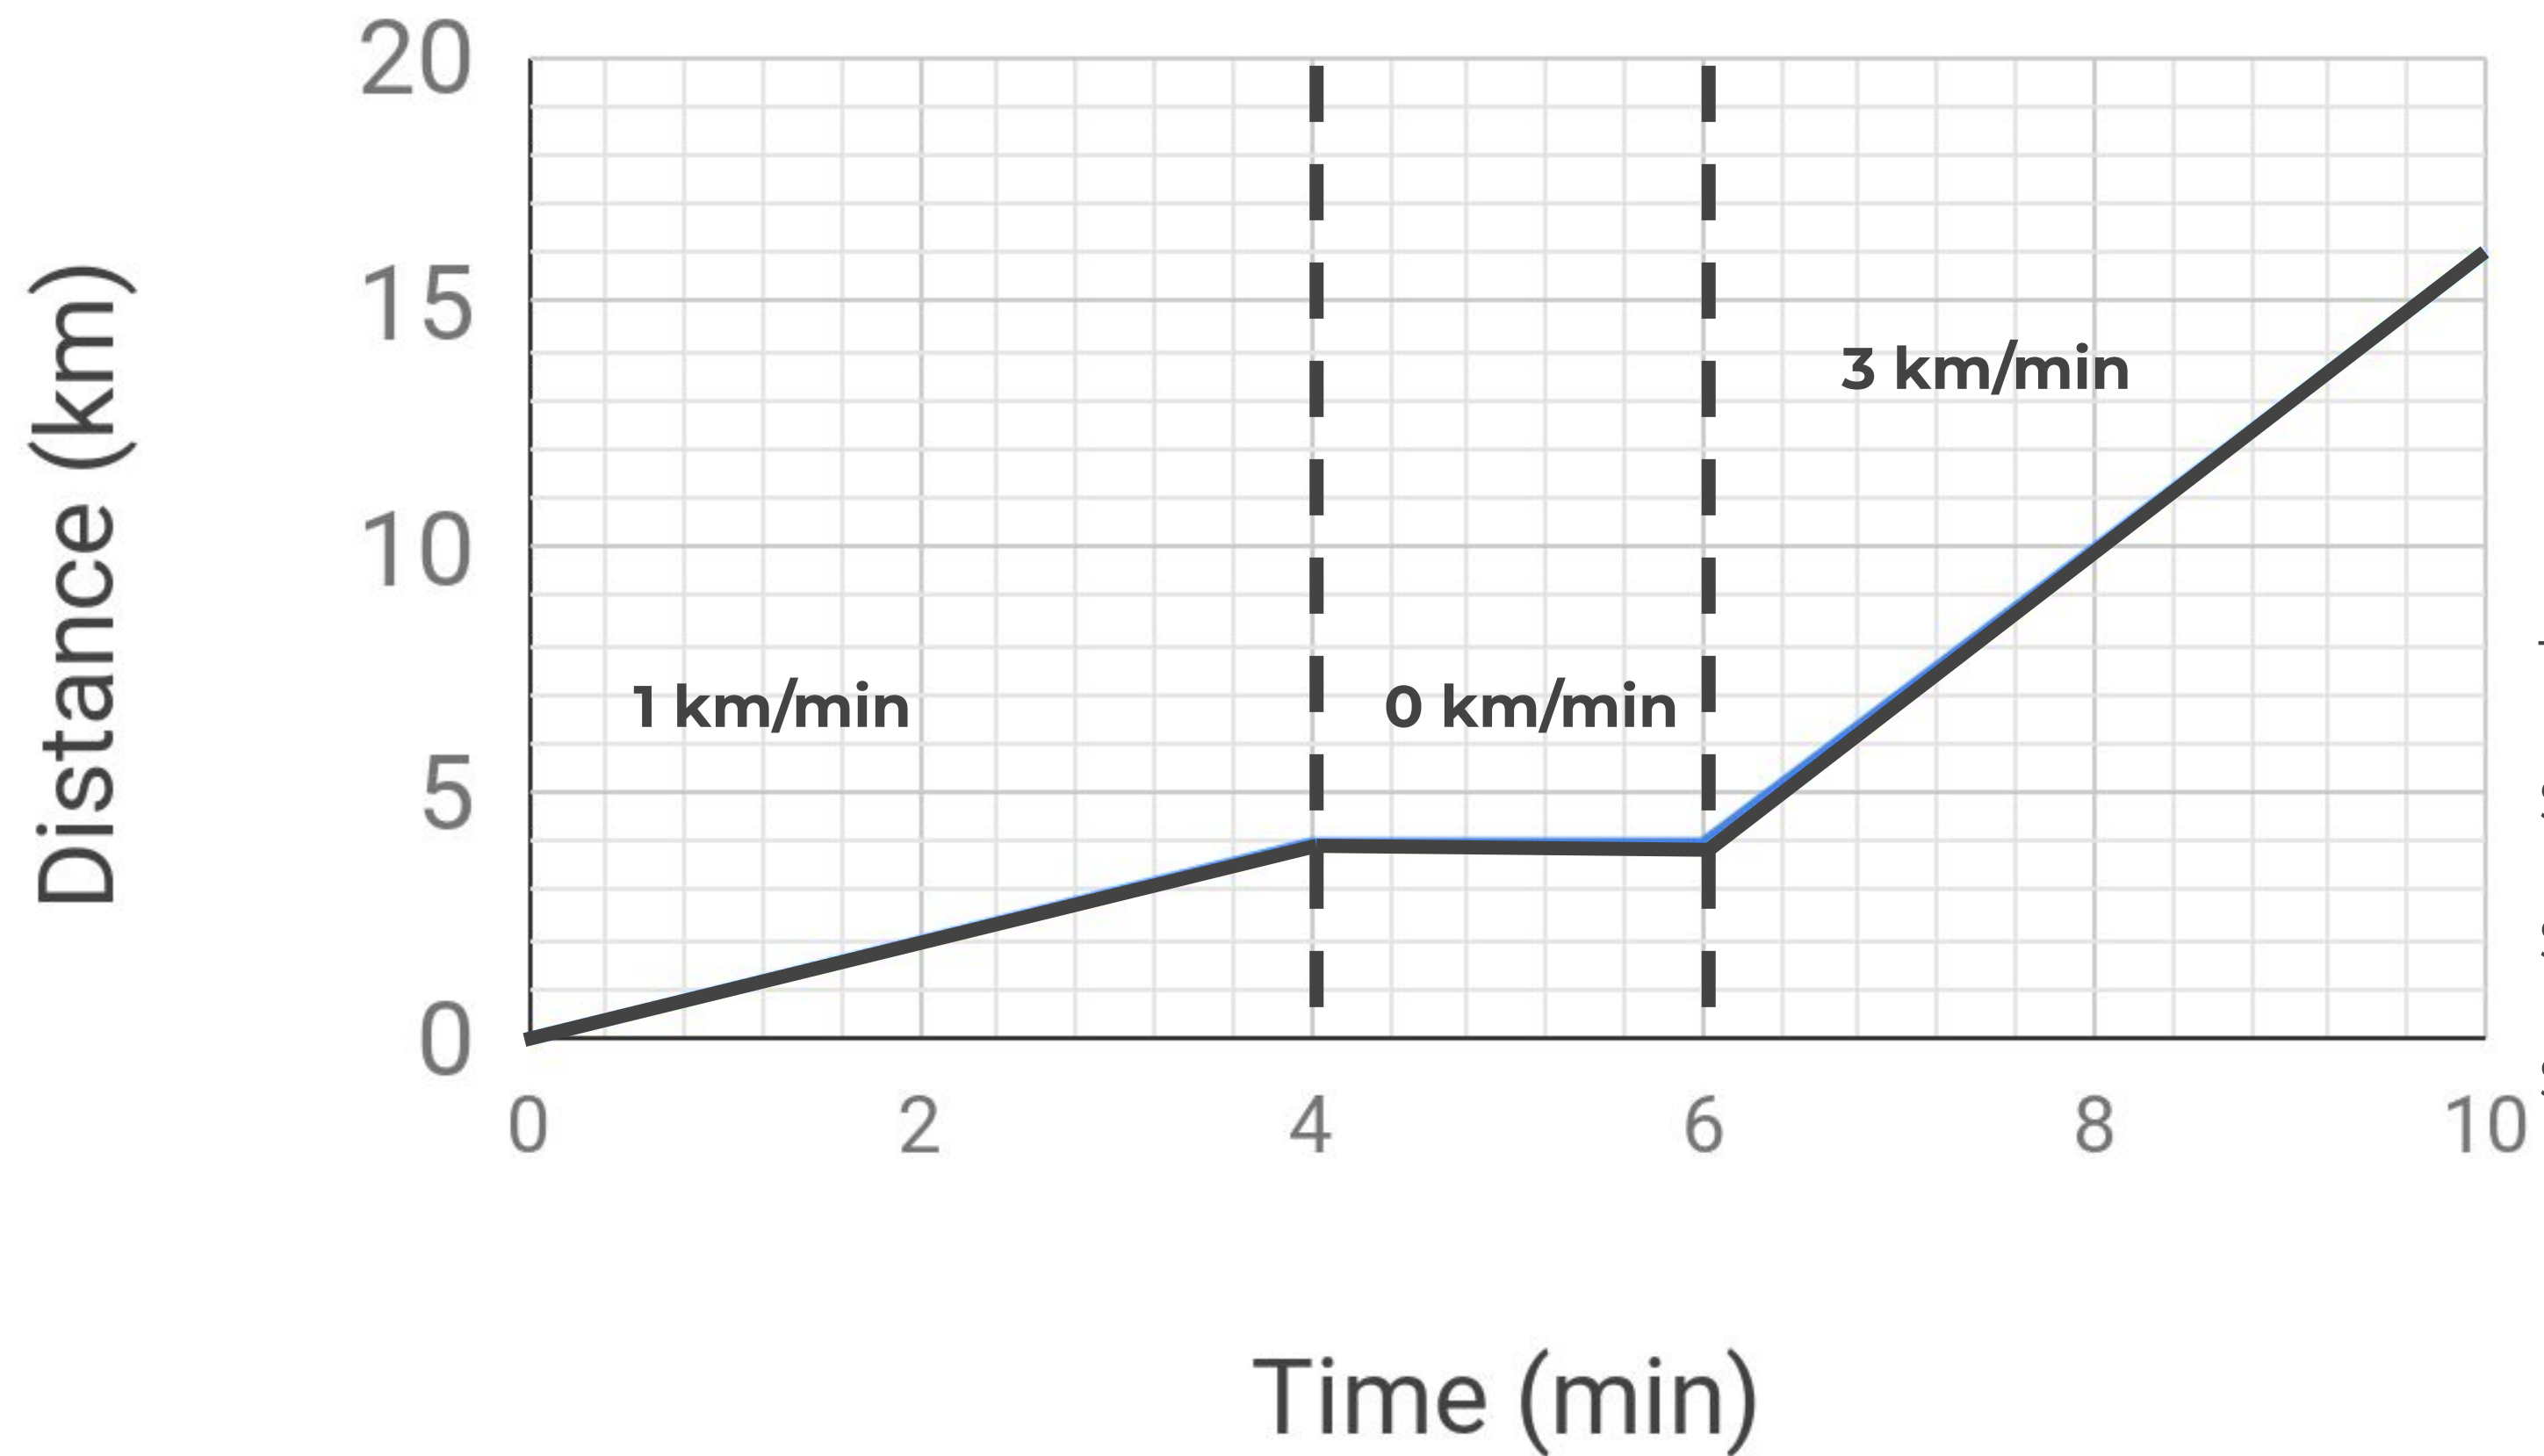

$$\text{Speed} = 1.875 \text{ m/s}$$

Distance = $16 - 4 = \mathbf{12}$ km

Time = $10 - 6 = \mathbf{4}$ min

Speed = Distance \div time

Speed = $\mathbf{12 \div 4}$

Speed = 3 km/min

Total Distance = **600** km

Time = **9** hours

Speed = Distance ÷ time

Speed = **600 ÷ 9**

Speed = 66.7 km/h
