# Represent Inequalities on a Coordinate Grid 2 (e.g. $y<2 x+3$ ) 

Miss Davies

Please note some slides do have colour images on them

## Representing inequalities on a coordinate grid

1. Represent the inequality on the coordinate grid.

$$
y \geq \frac{1}{2} x+1
$$

2. Represent the inequality on the coordinate grid.

$$
y<-x+3
$$

## Representing inequalities on a coordinate grid

3. Write down the inequality represented by the shaded area on the coordinate grid.

4. Represent the inequality on the coordinate grid.

$$
3 y>-6 x+18
$$

## Representing inequalities on a coordinate grid

5. Represent the inequality on the coordinate grid.

$$
\frac{1}{2} y+\frac{1}{2} x \leq 1
$$

6. Represent the inequality on the coordinate grid.

$$
3 y-8<-4 x
$$

Answers

## Representing inequalities on a coordinate grid

1. Represent the inequality on the coordinate grid.

$$
y \geq \frac{1}{2} x+1
$$

2. Represent the inequality on the coordinate grid.

$$
y<-x+3
$$

## Representing inequalities on a coordinate grid

3. Write down the inequality represented by the shaded area on the coordinate grid.

$$
y \geq-2 x+4
$$

4. Represent the inequality on the coordinate grid.

$$
3 y>-6 x+18 \quad y>-2 x+6
$$

## Representing inequalities on a coordinate grid

5. Represent the inequality on the coordinate grid.

$$
\frac{1}{2} y+\frac{1}{2} x \leq 1 \quad y \leq-x+2
$$

6. Represent the inequality on the coordinate grid.

$$
3 y-8<-4 x \quad y<-\frac{4}{3} x+\frac{8}{3}
$$
