Solving Further Linear Equations

$$\frac{x}{3} + 5 = 18$$

$$5 \quad 3x - 2 = \frac{x}{2} + 3$$

$$2 2(x+7) = 4(x+2)$$

$$6 \qquad \frac{x-2}{6} = \frac{x-5}{3}$$

$$3 \frac{5x+1}{7} = 3$$

$$7 16 - 5x = 2x + 2$$

$$4 \qquad \frac{3x+4}{2} = 5$$

$$8 \qquad \frac{x}{2} + 1 = \frac{2x + 6}{3}$$
