\* The lanthanides (atomic numbers 58 - 71) and the Actinides (atomic numbers 90 - 103) have been omitted. Relative atomic masses for **Cu** and **Cl** have not been rounded to the nearest whole number.

## Independent task

- 1. Why is nitric acid added before the silver nitrate?
- 2. Complete the table

Halide io
Cl-
Br⁻
<b> </b> -

n	Colour of precipitate

## Independent task

- 1. Describe how a student would test for the presence of bromide ions. State what a positive test will look like.
- 2. A student adds some acid to a white powder. The mixture fizzes and releases a gas. Name the gas released and explain what test should the students could do to obtain a positive result.
- 3. What is the test for sulfate ions? Include the observation for a positive test.
