

# What happens when you heat a solid?

Science

Miss Emms

I am going to do an experiment in which I will melt a solid.

You should **NOT** try to do this at home.

I am going to be using a candle which is very hot and can be dangerous.

You should watch and make observations but **DO NOT** do this at home.

# Draw the following table:

Prediction	What happens? Draw a picture of what you can see.	What happens? Describe what you can see.
I think...		

# Properties before and after

Properties of the chocolate BEFORE melting	Properties of the chocolate AFTER melting
